UNDERWRITER RECOMMENDATION MEMO

True Agentic Data Fabric – Motor Insurance Underwriting

=====

Policy Reference : POL-84C80BF4

Product : Motor-Comprehensive

Date & Time : 22 June 2026, 04:17 UTC

Channel : batch_demo

Generated by : CALF+CLIF Causal Underwriting Engine v2.0

APPLICANT SUMMARY

Age : 38.0 years

Annual income : Rs 600,000

Vehicle age : 1.0 years

Prior claims : 0.0

RISK PROFILE

Risk tier (CLIF) : High-Risk

ITE estimate : \$-782

(ITE < 0 = profitable to insurer | ITE > 0 = expected net loss)

CAUSAL FACTOR ANALYSIS

(Each factor assessed from ITE decomposition + DAG weights)

1. Prior Claims Count: Low (\$242 impact)

Causal weight : 0.31 (33.2% of total risk signal)

ITE impact : \$242 (reduces expected loss)

Assessment : Prior Claims Count – Low (value: 0.00): This factor reduces expected loss by \$242, accounting for 33.2% of the total risk signal (causal DAG weight: 0.31). Impact classification: HIGH.

Zero prior claims in the assessment period – this is the strongest positive indicator and qualifies this policy for the preferred claims-free discount. This is a PRIMARY decision driver – the underwriting outcome is materially determined by this factor.

2. Credit Score: Good (\$172 impact)

Causal weight : 0.22 (23.5% of total risk signal)

ITE impact : \$172 (increases expected loss)

Assessment : Credit Score – Good (value: 639.00): This factor increases expected loss by \$172, accounting for 23.5% of the total risk signal (causal DAG weight: 0.22). Impact classification: MODERATE. Credit score of 639.00 is in the Good band (≥ 0.60). Strong credit history is a reliable proxy for policyholder responsibility and reduced moral hazard exposure. This is a SECONDARY decision factor – it influences the risk tier and premium loading.

3. Vehicle Age: New (\$133 impact)

Causal weight : 0.17 (18.2% of total risk signal)

ITE impact : \$133 (reduces expected loss)

Assessment : Vehicle Age – New (value: 1.00): This factor reduces expected loss by \$133, accounting for 18.2% of the total risk signal (causal DAG weight: 0.17). Impact classification: MODERATE. Vehicle age of 1 years – near-new condition. Modern safety systems (ABS, ESC, airbags) are active. Mechanical reliability risk is minimal. This is a SECONDARY decision factor – it influences the risk tier and premium loading.

4. Engine Cc: Medium (\$78 impact)

Causal weight : 0.10 (10.7% of total risk signal)

ITE impact : \$78 (reduces expected loss)

Assessment : Engine Cc – Medium (value: 1200.00): This factor reduces expected loss by \$78, accounting for 10.7% of the total risk signal (causal DAG weight: 0.10). Impact classification: MODERATE. Engine displacement of 1200cc – standard range. No specific loading warranted on this factor. This is a SECONDARY decision factor – it influences the risk tier and premium loading.

5. Geographic Risk: Moderate (\$55 impact)

Causal weight : 0.07 (7.5% of total risk signal)

ITE impact : \$55 (reduces expected loss)

Assessment : Geographic Risk – Moderate (value: 0.50): This factor reduces expected loss by \$55, accounting for 7.5% of the total risk signal (causal DAG weight: 0.07). Impact classification: LOW. This factor shows a positive contribution of \$55 to the Individual Treatment Effect based on the causal DAG structure. This is a MINOR contributing factor – it does not materially change the underwriting outcome.

6. Age: Experienced (\$51 impact)

Causal weight : 0.13 (7.0% of total risk signal)

ITE impact : \$51 (reduces expected loss)

Assessment : Age – Experienced (value: 38.00): This factor reduces expected loss by \$51, accounting for 7.0% of the total risk signal (causal DAG weight: 0.13). Impact classification: LOW. Driver age of 38 is in the prime experience band (25-60). Lowest expected accident frequency. This factor is neutral. This is a MINOR contributing factor – it does not materially change the underwriting outcome.

UNDERWRITING DECISION

DECISION : REFERRED TO SENIOR UNDERWRITER

Premium : Rs 14,850 (indicative – subject to senior review)

Confidence: 68% (MODERATE). Only 3/4 primary factors are consistent. Risk profile is borderline. Senior underwriter review is required before any decision is communicated.

Primary reason : COMBINED RISK FACTORS

IRDA REASON CODES

UW-10: Combination of factors exceeds underwriting guidelines

TERMS AND CONDITIONS

Special conditions :

- Subject to senior underwriter approval
 - Additional documents may be required
-

COUNTERFACTUAL ADVICE TO APPLICANT

* This policy has no material adverse factors. No remediation advice is applicable – the applicant qualifies under standard underwriting criteria.

UNDERWRITER SIGN-OFF

System recommendation : REFERRED TO SENIOR UNDERWRITER

Human review required : YES – Mandatory

Underwriter signature : _____

Date : _____

Senior review (if req) : _____
=====

NOTE: Generated by CALF Causal Engine. All decisions are subject to human underwriter review and IRDA guidelines. Auto-approval applies only where confidence >= 85% and no IRDA adverse codes are triggered.
